MALAK SHOKRY - CYBER SECURITY & AUTOMATION DEVELOPER

Email: malakshokry73@example.com | OS Environment: Linux (ChromeOS)

=====

[PROFESSIONAL SUMMARY]

Highly capable Python Security Tools Developer and Linux Systems Specialist with proven expertise in engineering custom security auditing suites, data hardening protocols, and automation pipelines. Expert in overriding architecture limitations via localized rendering and programmatic networking controls.

[CORE TECHNICAL PROJECTS]

Project: Full-Stack Cyber Security Arsenal & Automation Suite

Role: Lead Python Security Tools Developer

Timeline: July 2026 - Present

â\200¢ Advanced Port Scanner (Timeout Control): Programmed a native socket-based network scanner integrated with a manual Timeout controller. Engineered specifically to bypass stateful firewalls and evasive server responses on platform boundaries like HackerOne.

â\200¢ Dynamic PDF Report Generation Engine: Integrated 'reportlab' document rendering architecture to dynamically structure system logs, generating tamper-proof, executive-level compliance PDF reports for direct B2B client monetization.

â\200¢ Data Hardening & Encryption: Implemented symmetric encryption protocols for sensitive files, securely isolating private cryptographic keys via enclosed system pipes to eliminate Command Injection risks.

â\200¢ Heuristic Password Security Auditor: Developed a responsive credential testing engine mapped against common leak patterns to audit enterprise access vulnerabilities.

â\200¢ Background Automation Threading: Authored multi-threaded monitoring scripts to continuously evaluate file sizes, executing self-maintenance log purges (capped at 5MB) to guarantee absolute local hardware storage efficiency.

[TOOLS & TECHNOLOGIES MASTERED]

â\200¢ Programming: Python 3 (Advanced Internals: threading, subprocess, urllib, socket)

â\200¢ Operating Systems: Linux (Debian/Bash Application Deployment, Systems Rescue, .bashrc Recovery)

â\200¢ Software Engineering: Version Control (Git/GitHub Architecture), ReportLab PDF Engine,

Arabic-Reshaper UTF-8 Formatting.
